

A chemical engineer, and holder of a PhD in Polymer and Composite Materials from the University of Lyon, Sophie Rouif joined Ionisos in 2000 after an initial industrial experience, to develop activities related to the modification of materials by ionizing radiation. She has established both academic and industrial partnerships. Over the years, she has developed recognized expertise in the interactions between materials and ionizing radiation. Consequently, she identified the expectations of the medical sector to sterilize new health products that are potentially sensitive to ionizing radiation. Since 2018, she has been lending her expertise to the entire Ionisos group, which operates across 7 sites in France and 5 sites in Europe (Spain, Switzerland, Germany, Estonia).
